Practical / Laboratory Report — Reference Template

Reference document A | Required content checklist | Version 1.0

1. Aim

A1. Aim: State the purpose of the experiment and what the experiment is intended to demonstrate or measure.

2. Materials and Setup

A2. Materials: List the equipment, instruments, software, and materials needed to perform the experiment.

A3. Procedure: Provide ordered steps that another person can follow to repeat the experiment safely.

3. Observations and Analysis

A4. Observations: Record the measured values, observations, tables, or other data collected during the experiment.

A5. Analysis: Explain what the observations mean and compare the results with the expected behavior or theory.

4. Result and Safety

A6. Result: State the outcome and whether the aim was achieved, supported by the observations.

A7. Safety: Identify relevant risks and precautions taken while carrying out the experiment.

Testing note: Each A-numbered item is an independent required point.
