General Technical Document — Reference Template

Reference document B | Required content checklist | Version 1.0

1. Purpose and Intended Use

B1. Purpose: Explain what the system or product is intended to do and the problem it solves.

B2. Scope and boundaries: State what is included in the system, what is outside its scope, and identify its main components or subsystems.

2. Functions and Interfaces

B3. Core functions: Describe the main actions the system performs and the expected outputs or results.

B4. Interfaces: Identify the users, external systems, hardware, or communication interfaces that exchange information with the system.

3. Safety and Failure Handling

B5. Safety: Explain important hazards or failure conditions and describe how the system detects, handles, or recovers from them.

4. Performance and Verification

B6. Acceptance criteria: Include at least one measurable performance or quality target, with a value or clear pass/fail condition.

B7. Testing: Describe how the system will be checked, including test scenarios or evidence used to decide whether it behaves correctly.

Testing note: Each B-numbered item is an independent required point. The target document is intentionally incomplete.
