Reference Standard: SRS Quality & Compliance Specification

Standard Version: 0.4 | Regulatory Baseline: DO-178C / IEEE 830

A. Mandatory Specification Sections

SEC-1: Scope and System Overview - High-level description of system purpose, operational scope, and subsystem bou

SEC-2: Functional Requirements - Functional capabilities, actions, transformations, and system behavioral requirement

SEC-3: Interface Requirements - Hardware, software, bus, communications protocol, and user interface specifications.

SEC-4: Safety and Failure Handling - Fault detection, exception handling, containment modes, and fail-safe recovery pr

B. Quality Verification Rules (R1 - R4)

R1: Unique Requirement ID - Every requirement must have a unique identifier (e.g., REQ-001).

R2: Clear Behaviour - The requirement must describe what the system shall do using clear binding normative language

R3: Measurable Criteria - The requirement should contain measurable/verifiable criteria where applicable.

R4: Avoid Vague Language - Detect vague words that introduce ambiguity into specifications.

C. Regulatory Parameters & Lexicons

Binding Modal Verb: shall

Prohibited Vague Words: quickly, fast, easy, adequate, user-friendly
